EXPERIENCE

6+ Years

Production infrastructure, 5 years in DevOps

CERTIFICATIONS

4 Certified

AWS Solutions Architect · CEH · Huawei HCIA R&S + Security

CORE STACK

AWS + Terraform

Kubernetes · Docker · Helm · Jenkins · GitHub Actions · Ansible

KUBERNETES IN PRODUCTION

6M+ Calls / Month

Docker + Kubernetes workloads run end-to-end for 4,000+ business clients

SUMMARY

DevOps Engineer with 5 years of DevOps and 6+ years of production infrastructure experience, building and running AWS and Kubernetes platforms, CI/CD pipelines and Infrastructure as Code (IaC) for live production systems. Currently delivers DevOps for a US crypto-asset platform (KresusLabs); previously owned the infrastructure of a telecom cloud contact center processing 6M+ calls/month for 4,000+ business clients. Cut deployment time by 40% and runs 100+ AWS resources at 99.9% uptime. Networking and security background (AWS Solutions Architect, CEH) applied to the security and high availability of production systems.

SKILLS

Cloud & IaC: AWS (EC2, VPC, IAM, ALB, S3), Terraform, Ansible, Azure, Vultr

Containers & Orchestration: Kubernetes (Deployments, StatefulSets), Docker, Helm, MicroK8s

CI/CD & GitOps: Jenkins, GitHub Actions, Argo CD, Git, GitHub, GitLab; multi-environment pipelines

Observability: Prometheus, Grafana, ELK Stack, Splunk, Nagios

Security: AWS IAM & VPC security, firewalls, VPN, IDS/IPS; penetration testing (Nmap, Metasploit, Burp Suite)

Linux & Scripting: Ubuntu, CentOS, Red Hat Enterprise Linux, Nginx; Bash, Python, Go, JavaScript (Node.js)

Networking & VoIP: TCP/IP, BGP, OSPF, VLANs, HSRP/VRRP, NAT, VPN (Cisco, Huawei); Asterisk, Kamailio, SIP

WORK EXPERIENCE

DevOps Engineer

TekHQS | Remote | Feb 2024 – Present

DevOps engineer for KresusLabs Inc. (USA), Kresus Crypto Vault crypto-asset platform, plus further Web3/SaaS client platforms.

- Redesigned the CI/CD pipelines for Kresus Crypto Vault with Jenkins, Docker and Helm, reducing deployment time by 40%, with image and container scanning and AWS Secrets Manager.
- Diagnosed recurring production pod evictions on EKS, built a hardened replacement cluster and rebuilt monitoring as code with Amazon Managed Grafana and CloudWatch (20 dashboards, 35 alert rules).
- Manage 100+ AWS resources (EC2, VPC, subnets, IAM, ALB load balancers, S3) as code with Terraform and Ansible for scalability and security compliance, maintaining 99.9% infrastructure uptime.
- Built and maintain 20+ multi-environment CI/CD pipelines (Jenkins, GitHub Actions) delivering containerized services to Kubernetes through Helm charts and GitOps workflows.
- Mentor junior DevOps engineers and standardize CI/CD conventions across cross-functional development teams.
- Implemented monitoring, centralized logging and alerting with Prometheus and the ELK Stack for proactive detection and faster troubleshooting of production issues.
- Delivered DevOps for 10+ further client projects (AI, Web3 and SaaS products for international clients) on AWS, Azure and Vultr.

Stack: AWS, Kubernetes, Docker, Helm, Jenkins, GitHub Actions, Terraform, Ansible, AWS Secrets Manager, Prometheus, Grafana, ELK, Linux, Azure, Vultr

Senior VoIP & DevOps Engineer

LastingSales (HadiTelecom) | Lahore, Pakistan | Nov 2021 – Feb 2024

Zong vPBX cloud contact-center platform delivered with Zong (China Mobile Pakistan) to 4,000+ corporate clients, plus the LastingSales CRM.

- Owned the complete on-premises production infrastructure of a platform processing 6M+ calls/month for clients in banking, hospitality, education, healthcare and automotive.
- Migrated legacy applications to Kubernetes, improving fault tolerance and reducing hosting costs; ran Docker-containerized microservices and stateful databases (Deployments, StatefulSets).

- Built Jenkins CI/CD pipelines that build Docker images on every push to the development branch and deploy them to AWS, enabling zero-downtime releases of the VoIP management portal.
- Implemented centralized monitoring and logging with Prometheus, Grafana and the ELK Stack across all production services.
- Automated server installation and configuration with Ansible playbooks, replacing manual setup with repeatable provisioning.
- Supervised the team developing custom SIP applications and Asterisk dialplans for enterprise call routing.

Stack: Kubernetes, Amazon EKS, Docker, Jenkins, Ansible, AWS, Prometheus, Grafana, ELK, CentOS/Ubuntu, Asterisk, Kamailio, SIP

KEY PROJECTS

Kresus Crypto Vault: Secure CI/CD & Release Automation | Private, client project (TekHQS)

Redesigned the build-and-release pipelines of a US crypto-asset platform with image and container vulnerability scanning, environment configuration kept out of code and secrets from AWS Secrets Manager delivered as Kubernetes Secrets; services ship across environments via Helm and GitOps. **Deployment time cut by 40%.**

Stack: Jenkins, GitHub Actions, Docker, Helm, Kubernetes, AWS, AWS Secrets Manager

Digital-Asset Platform: Multi-Region Disaster Recovery | Private, client project (TekHQS)

Hot DR copy in a second AWS region, created, validated and removed with one click: 16 region-portable Terraform stacks and continuous replication of databases, storage, images and secrets. **Max replica lag 37 s** in the DR test.

Stack: Terraform, Amazon EKS, RDS, DynamoDB, S3, GitHub Actions

RYT Blockchain Platform: Cloud Infrastructure | Private, client project (TekHQS)

Ran five isolated blockchain environments on AWS (Graviton nodes) and rebuilt the security-test environment into private subnets behind load balancers and a bastion host, with Prometheus, Grafana and Loki for observability.

Stack: AWS (EC2, VPC, ALB, RDS), Prometheus, Grafana, Loki

Telecom Contact-Center Platform: Kubernetes Migration | Private, LastingSales

Moved legacy applications into Docker containers on Kubernetes (Deployments, StatefulSets for databases), improving fault tolerance and reducing hosting costs for a platform handling **6M+ calls/month**.

Stack: Kubernetes, Docker, Prometheus, Grafana, ELK Stack

LastingSales CRM: Microservices on EKS & vPBX Integration | Private, LastingSales

Deployed the CRM as containerized microservices on Amazon EKS with Jenkins pipelines in Groovy, Prometheus and Grafana monitoring and backup scripts; connected it to Zong vPBX so call records flow into the CRM automatically.

Stack: Amazon EKS, Docker, Jenkins (Groovy), Prometheus, Grafana

EARLIER ROLES

Network & VoIP Administrator | Marhaba Laboratories Pvt Ltd, Lahore | Aug 2020 – Oct 2021

Administered network, servers, backups and disaster recovery; deployed a Linux/Asterisk VoIP exchange with Cisco IP phones.

Network & VoIP Engineer (Freelance) | Ramada Hotel, Radisson, Wasif Traders, Lahore | Feb 2021 – Oct 2021

Designed a hotel network (Cisco switching); deployed containerized Asterisk VoIP, mail and FTP servers.

Network Administrator (Internship) | HadiTelecom, Lahore | Dec 2020 – Mar 2021

Monitored CentOS VoIP servers and Cisco devices; deployed Splunk for network monitoring.

CERTIFICATIONS

AWS Certified Solutions Architect | Amazon Web Services

Certified Ethical Hacker (CEH) | EC-Council

Huawei Certified ICT Associate: HCIA Routing & Switching, HCIA Security | Huawei

Certified Kubernetes Administrator (CKA) | in preparation

EDUCATION

B.Sc. Computer Science | Virtual University of Pakistan, Lahore

2016 – 2020
